

Bug Tracker opened

Description

As in the next time MyContacts will be released in version 1.0, we thought of a bug tracking system to make it easier for us and for our customers/beta testers to report feature wishes and bugs and keep track of them. The bug tracker we use is an opensource project on sourceforge.net and is called [Bug Tracker](#).

You can access the Bug Tracker from the **Flojo-Soft Bug Tracker** item in the menu link list or directly through <http://bugs.flojo-soft.com>.

UPDATE:

Sorry for the circumstances, but we switched to another Bug Tracker System now, as it gives us the possibility to add documents, FAQs and it also has a simple CRM integrated.
